

# Two Dice

Here are two dice.

If you add up the dots on the top you'll get 7.

Find two dice to roll yourself. If you don't have dice at home, you could use these interactives ones: <https://www.random.org/dice/>

Add the numbers that are on the top.

What other totals could you get if you roll the dice again?

To help you add, you could use counters or beans.

## Going deeper

- What's the largest total you could possibly get?
- What's the smallest?
- Make a tally chart to show how many times you make each total. What do you notice? What do you wonder?
- What do you notice about the totals of opposite faces on a dice?
